Billing handbook

This handbook describes how the billing team runs settlement, reconciliation and pricing.

It is written for new finance operations staff.

How billing works

Customers are charged at the start of each billing period.

Charges are collected by the payment gateway and settled into the company bank account in daily batches.

Settlement reconciliation

Reconciliation confirms that every settled batch matches the ledger.

Finance reviews the settlement report every morning and compares it with the ledger totals. Finance reviews the settlement report every morning and compares it with the ledger totals.

Step one is to download the settlement report for the previous day.

Finance reviews the settlement report every morning and compares it with the ledger totals. Finance reviews the settlement report every morning and compares it with the ledger totals. Finance reviews the settlement report every morning and compares it with the ledger totals.

Step two is to match each settled payment to a ledger entry by payment reference.

Step three is to list every unmatched payment on the exceptions sheet.

Finance reviews the settlement report every morning and compares it with the ledger totals. Finance reviews the settlement report every morning and compares it with the ledger totals.

Unmatched payments older than 14 days are escalated to the finance-ops queue.

After escalation the exceptions sheet is archived by the team lead.

Pricing plans

The table below lists the three plans and their limits.

Plan	Price per month	Storage limit	Seats
Starter	$49	50 GB	3
Team	$199	500 GB	25
Enterprise	$1499	5 TB	unlimited
